I have reviewed the new flood projections and noticed that the topography for my street appears to be out of date.

[redacted] is a new infill development within Canadian which is nearby Pennyweight Gully. Prior to this development, it appeared to be vacant land with a small dam or basin, which the new maps show as subject to flood risk. The area has since been backfilled, and civil works carried out as per a new development, to I believe a much greater height than reflected in the map topography used for the study. I've attached images of both the flood map, and of the current situation.

Hopefully this can be reviewed with more up to date topography, and help better clarify if we are affected when the flood maps are finalised.

Thanks for your time,

[redacted]
