- 3 x Lakeside drop-in sessions (weekday and weekend)
- Special Event drop-in session (Springfest)

Demographics Engaged

- Ages 9 – 78
- CALD Persons
- Disabled Persons
- Indigenous Persons
- LGBTQA+ community
- Runners / Cyclists
- Walking Groups
- Rowing Clubs
- Local schools
- Parents

Captured Sentiment:

Supporters of the Loreto site area often argued that this location would be useful for supporting portable toilet use during events and that the community was already familiar with the location. However, community feedback also included concerns regarding the proximity to Loreto College and the visual prominence that a facility in that location would likely detract from the character and appeal of the area.

Supporters of the St Patrick's often pointed to the playground and existing accessible parking as key reasons for their vote. We heard from parents and grandparents who shortened lake visits because there were no toilets in this area. We also heard from runners that would like toilet near the start of the trail.

Public sentiment was largely consistent across both sites regarding suggestions and desired outcomes. The overarching expectation was for an accessible facility designed in a thoughtful and sympathetic manner that complements the surrounding environment. In addition to this broad sentiment, specific requests included a minimum of three cubicles, security lighting, a drink fountain, and measures to ensure a strong sense of safety around the facility.
